 Suppose an economy has only two sectors: Goods and Services. Each year, Goods sells 75% of its outputs to Services and keeps the rest, while Services sells 69% of its output to Goods and retains the rest. Find equilibrium prices for the annual outputs of the Goods and Services sectors that make each sector's income match its expenditures.

Denote the prices (that is, dollar values) of the total annual outputs of the Goods and Services sectors by p_{G} and p_{S} , respectively.

If p_S = \$1000, then p_G = \$. (Type an integer or a decimal.)

If p_S = \$75, then p_G = \$. (Type an integer or a decimal.)

ID: 1.6.1

2. Suppose an economy consists of the Coal, Electric, and Steel sectors. Denote the prices (that is, dollar values) of the total annual outputs of the Coal, Electric, and Steel sectors by p_C, p_E, and p_S, respectively. Suppose the general solution to find equilibrium prices that make each sector's income match its expenditures is p_C = 0.89p_S, p_E = 0.84p_S, and p_S is free. One set of equilibrium prices for this economy is p_C = \$89, p_E = \$84, and p_S = \$100. Find another set. Suppose the same economy used Japanese yen instead of dollars to measure the values of the various sector's output. Would this change the problem in any way? Discuss.

If p_S = \$200, then p_C = \$____ and p_E = \$___ . (Type integers or decimals.)

How would changing the unit of measurement to Japanese yen change this problem?

- A. It has the same effect as multiplying all equilibrium prices by a constant. The ratios of the prices will change, but the prices will remain the same.
- B. It has the same effect as multiplying all equilibrium prices by their reciprocal and some constant. The prices will change, but the ratios of the prices will remain the same.
- C. It has the same effect as multiplying all equilibrium prices by a constant. The prices will change, but the ratios of the prices will remain the same.
- O. It has the same effect as multiplying all equilibrium prices by their reciprocal and some constant. The prices and the ratios of the prices will change.

i I	Consider an economy with three sectors, Chemicals & Metals, Fuels & Power, and Machinery. Chemicals sells 20% of its output to Fuels and 60% to Machinery and retains the rest. Fuels sells 80% of its output to Chemicals and 10% to Machinery and retains the rest. Machinery sells 20% of its output to Chemicals and 40% to Fuels and retains the rest. Complete parts (a) through (c) below.
--------	---

a. (Construct	the	exchange	table	for	this	economy	1
------	-----------	-----	----------	-------	-----	------	---------	---

Distribution of C	output from:	····		···

ID: 1.6.3				

- 4. Suppose an economy has four sectors: Mining, Lumber, Energy, and Transportation. Mining sells 10% of its output to Lumber, 60% to Energy, and retains the rest. Lumber sells 15% of its output to Mining, 60% to Energy, 20% to Transportation, and retains the rest. Energy sells 30% of its output to Mining, 20% to Lumber, 25% to Transportation, and retains the rest. Transportation sells 10% of its output to Mining, 15% to Lumber, 50% to Energy, and retains the rest.
 - a. Construct the exchange table for this economy.
 - b. Find a set of equilibrium prices for this economy.
 - a. Complete the exchange table below.

Distribution of Output from:					
_	Mining	Lumber	Energy	Transportation	Purchased by:
_	-pure-sea				Mining
_	1000-000-00		- 140010000		Lumber
_					Energy
					Transportation
		s (that is, dollar v ors by p _M , p _L , p _E			of the Mining, Lumber, Energy,
If p _T =	\$100, then p	_M = \$, p _L = \$, and p	o _E = \$
(Roun	d to the near	est dollar as need	ded.)

5. Balance the chemical equation.

$$B_2S_3 + H_2O \rightarrow H_3BO_3 + H_2S$$

Assume the coefficient of H2S is 3. What is the balanced equation?

 $\underline{\hspace{1cm}} B_2S_3 + \underline{\hspace{1cm}} H_2O \rightarrow \underline{\hspace{1cm}} H_3BO_3 + \underline{\hspace{1cm}} H_2S$

ID: 1.6.5

6. Balance the following chemical equation.

$$H_3O + CaCO_3 \rightarrow H_2O + Ca + CO_2$$

Assume the coefficient of CO₂ is 1. What is the balanced equation?

ID: 1.6.7

7. Balance the chemical equation.

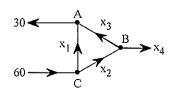

$$PbN_6 + CrMn_2O_8 \rightarrow Pb_3O_4 + Cr_2O_3 + MnO_2 + NO_3$$

Assume the coefficient of NO is 90. What is the balanced equation?

 $\underline{\hspace{1cm}} PbN_6 + \underline{\hspace{1cm}} CrMn_2O_8 \rightarrow \underline{\hspace{1cm}} Pb_3O_4 + \underline{\hspace{1cm}} Cr_2O_3 + \underline{\hspace{1cm}} Mn$

Find the general flow pattern of the network shown in the figure. Assuming that the flows are all nonnegative, what is the largest possible value for x₃?

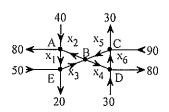

Find the general flow pattern of the network shown in the figure. Choose the correct answer below and fill in the answer boxes to complete your choice.

$$\begin{array}{c} A. & \begin{cases} x_1 = _ & \\ x_2 = _ & \\ x_3 = _ & \end{cases} & \begin{cases} x_1 \text{ is free} \\ x_2 = _ & \end{cases} & \begin{cases} x_1 = _ \\ x_2 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 \text{ is free} \end{cases} & \begin{cases} x_1 = _ \\ x_2 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 = _ \end{cases} & \begin{cases} x_1 = _ \\ x_3 = _ \\ x_3 =$$

Assuming that the flows are all nonnegative, what is the largest possible value for x_3 ?

The largest possible value for x₃ is _____.

- a. Find the general flow pattern of the network shown in the figure.
 - b. Assuming that the flow must be in the directions indicated, find the minimum flows in the branches denoted by x_2 , x_3 , x_4 , and x_5 .

a. Choose the correct answer below and fill in the answer boxes to complete your choice.

0	Α.	○ В.	○ c.	⊃ D .
	x ₁ =	x ₁ is free	$\int x_1 =$	(x ₁ =
	x ₂ is free	x ₂ =	x ₂ =	x ₂ is free
	x ₃ =	x ₃ =	x ₃ is free	x ₃ is free
Ì	x ₄ is free	x ₄ =	\[x_4 =	x ₄ is free
	x ₅ is free	x ₅ =	x ₅ =	x ₅ is free
	x ₆ =	x ₆ =	x ₆ is free	x ₆ =

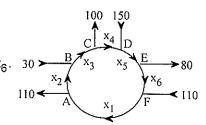

b. The minimum flow of x_2 is _____.

The minimum flow of x₃ is _____.

The minimum flow of x₄ is _____.

The minimum flow of x₅ is _____.

10. Intersections in England are often constructed as one-way "roundabouts," such as the one shown in the figure. Assume that traffic must travel in the directions shown. Find the general solution of the network flow. Find the smallest possible value for x₆. 30 >

What is the general solution of the network flow? Choose the correct answer below and fill in the answer boxes to complete your choice.

\cup	Α. Ο) B. ()) C .	D.
	x ₁ is free	x ₁ =	x ₁ is free	x ₁ =
	x ₂ =	x ₂ =	x ₂ =	x ₂ is free
•	x ₃ =	x ₃ =	x ₃ is free	x ₃ =
	x ₄ =	x ₄ =	x ₄ is free	x ₄ =
	x ₅ =	x ₅ =	x ₅ =	x ₅ is free
	x ₆ is free			

Find the smallest possible value for x_6 .

The smallest possible value for x₆ is _____.
